FOR IMMEDIATE RELEASE:

MOORE ENERGY RECEIVES INCREASED CALLS DUE TO REVENUE GRADE METER REQUIREMENTS IN NJ

March 27, 2013 - New Jersey now requires that all solar systems report electric output via a Revenue Grade Meter in order to continue collecting SRECs. According to PJM Environmental Services, SRECs will not be created until a Revenue Grade Meter is installed. This meter is in addition to the electric meter installed by your local utility to measure your home or business' electric consumption for net metering. New Jersey will no longer allow the use of production estimates or reporting via the Inverter.

“Due to these recent regulatory changes, we have seen a spike in phone calls from New Jersey solar customers. We are happy to be able to service and help them maintain their systems so that they can continue to collect their SRECs” commented Barry Moore, President of Moore Energy. Moore Energy offers maintenance, warranty and performance evaluation services on solar photovoltaic systems for Moore Energy customers, and customers of solar installers that are no longer in business.

About Moore Energy:

Moore Energy is a premier firm specializing in solar photovoltaic power systems for commercial and residential properties. We are the single source for our customers providing the design, cost/benefit analysis, installation, and system maintenance. Moore Energy is committed to providing our clients with the highest level of service. All of our systems are professionally installed and fully tested by our specially trained installers. For more information, visit www.MooreEnergy.com.
