Moore Energy Meets with Congressman Brian Fitzpatrick to discuss Solar Power

On Wednesday August 8th Barry Moore of Moore Energy was invited by Congressman Brian Fitzpatrick to inspect the solar system at Maximuck Farms. Moore Energy installed the solar system at Maximuck farms in 2010 and is honored to have been invited by Congressman Fitzpatrick to inspect it. Congressman Fitzpatrick has done a superb job promoting clean energy and continues to push for the use of renewable energy sources. Maximuck farms is a local farmers market known for its eco-friendly growing methods and Moore Energy is proud to be able to help local businesses thrive.

While on the site Barry Moore explained how the PV system works and how a PV system assists businesses and homes in reducing their electrical cost. At the same time, it saves Carbon Dioxide from entering the atmosphere which is helping reduce their carbon footprint.

Maximuck farms is in Doylestown, PA and is a local farmers market that has been in business for many years and is very well known for their eco-friendly growing methods. The first greenhouse was constructed in 2005 and within the next several years, 3 more were up and running. Since the inception of the solar array in 2008, the system produced over one million kilowatts of power in Pennsylvania. In the commercial sector most projects get paid off in 3-5 years and in residential sectors is paid off in 6-8 years.

Moore Energy is also proud to be the supplier of Energy Storage Systems by Fortress Power. These batteries are very useful for power outage emergencies and provide clean, reliable back-up power in case of outages. The batteries in addition to the PV array give people a 30% tax credit and more importantly, peace of mind when severe weather comes into the area.
